0900-1900 @ DOJO KL

BLOCKCHAIN BOOTCAMP 2018

Ethereum and Smart Contract Development, An Intensive 1-day Workshop

{ Workshop Details }

Workshop Date: 3rd February 2018
Workshop Venue: DOJO KL, Malaysia

{ Workshop Overview }

Blockchain Bootcamp by Blocklime is the first in a series of intensive workshops. This 1 day course is designed specifically for software developers, tech experts and Blockchain enthusiasts who wish to get a quick deep dive into coding in the Blockchain platform Ethereum. You will love our practical, hands-on sessions as we believe the only way to learn is to get right into it!

Bootcamp custom available**

{ Workshop Modules }

- 1 Ethereum Fundamentals**
Learn the fundamental elements of Ethereum along with how it differs from other gen-1 and gen-2 Blockchains.
- 2 The Development Ecosystem**
Go hands-on with the truffle framework for smart contract creation, compilation and deployment.
- 3 Programming in Solidity**
Learn the basics of coding a smart contract from writing headers and imports to function overriding and inheritance.
- 4 Smart Contract Assignment**
Test out what you have learnt by creating and deploying your own smart contract on Ethereum's Rinkeby testnet.

{ Participants Feedback }

“ It doesn't look like it's the first Bootcamp. The delivery was **superb**. The facilitator have **mastery** and **experience** on the topics discussed. ”

————— Leeman Samaila
Student

“ I believe it was **perfectly planned**. The topics were very **well prepared** and **comprehensible**. The overall organisation is very good. The staff are **friendly**. ”

————— Bibi Noorina Nawaar Kausmally
Student

“ It is a **great bootcamp** where we able to learn the basic of the programming! ”

————— Melvinder Jit Singh
Developer

“ It was **insightful**. And **bring together like minded people** is an excellent way to grow the Blockchain Community! It was an opportunity to visit your beautiful country again. Good Job! ”

————— RS RS
Developer

“ **Amazing Experience**. **Quality Knowledge**. **Enthusiastic People!** Thank you for granting me the scholarship! ”

————— Noor Ina
Student

Media Coverage

“ Many try to learn online, but have a hard time seeing through the noise. So, there needs to be “more actual technical and development education”... ”

3 things Malaysia's blockchain ecosystem needs right now

There is no topic more polarizing than blockchain at the moment. One camp believes it will revolutionize every sector while the other camp thinks it is nothing but a fad.

I'm personally interested in the combination of digital tokens and blockchain in creating virtual continuity, which sounds like a fundamental breakthrough. However, people are giving tremendous weight on the crowdfunding part of cryptocurrencies, giving scant regard for the real power of blockchain.

So, when I was given a chance to moderate a panel discussion on the blockchain ecosystem in Malaysia, I set out to investigate the local ecosystem's needs at this very moment. The panelists were from [HelloGold](#), [Access Blockchain Association Malaysia](#), and [Blocklime](#), which all have their hands in the local blockchain ecosystem.

Here were the three key takeaways as it relates to what the blockchain ecosystem in Malaysia needs right now to grow.

© Dave Appleton, Suraya Zakaria, Harpreet Singh, and the author.

Quality community building

Dave Appleton (a member of HelloGold's technical staff) voiced his concern for the current set up. According to him, "The moment people in Malaysia start talking about blockchain, they talk about investment schemes and mining contracts."

The public's general blockchain and cryptocurrency education has definitely not kept pace with the popularity of the tech, leading opportunists to capitalize on the hype. Appleton believes the community needs to deal with responsible media to "get the message across on what blockchain is really all about to fight this."

ICOs used to be very community driven, with technically-sound people investing in them. But it has grown to a stage where they are attracting more mainstream investors.

Unlike other cities, Kuala Lumpur is fragmented, having scattered centers of influence. To combat this, Appleton thinks there needs to be more medium-sized community events so proper education and meaningful sharing on the use cases of blockchain can be done more frequently.

However, when asked about the interaction between blockchain developers in Malaysia, Harpreet Singh (CEO of Blocklime) stressed there might be a lack of a tech-focused blockchain community:

"You don't have proper communication among the developers in Malaysia. A lot of groups are either working in silos or out to share about ways to profit from blockchain, whereas discussion on tech is actually very rare."

Possible Collaboration and Partnership
